No one has a clue to the PRP. It was found during a survey of a wide area of NOLA for some event. The city tried to clean it up when they thought it was one small spot. They found the contamination under two asphalt pavings and a shell layer that the City thinks was put there in the 40s or 50s. So, I don't think we will try to identify or chase any PRPs. But ya never know....

I started with an easy name. That way I can change it tomorrow, and then on March 8<sup>th</sup> and again on April 1<sup>st</sup>. I really wanted to call it: "a radioactive source that was found in New Orleans on Lowerline Street"
